

What is claimed is:

1. A method of changing a gynecological condition of a female comprising:
evaluating the condition of a uterus of said female;
introducing a presterilized implant into said uterus;
contacting said implant with uterine tissue so as to induce a tissue response in said uterus;
maintaining contact between said implant and said uterine tissue for at least so long that said tissue response causes a changed gynecological condition in said female.
2. A method according to claim 1, wherein the contact between said implant and said uterine tissue is maintained at least until adhesions are formed in said uterus.
3. A method according to claim 1, wherein the contact between said implant and said uterine tissue is maintained at least until contraception in said uterus is achieved.
4. A method according to claim 1, wherein the contact between said implant and said uterine tissue is maintained at least until menorrhagia has been substantially eliminated in said female.
5. A method according to claim 1, wherein the contact between said implant and said uterine tissue is maintained at least until walls of said uterus adhere together.
6. A method according to claim 1, wherein said presterilized implant is coated with an adhesion inducing substance.
7. A method according to claim 6, wherein said presterilized implant is coated with a biologic coating prior to introducing said implant into said uterus.
8. A method according to claim 1, wherein said presterilized implant is formulated at least in part from polyester prior to its introduction into said uterus.

9. A method according to claim 1, wherein said presterilized implant is introduced through a catheter.
10. An implant for changing the gynecological state of a female comprising:
 - a presterilized substance;
 - said substance configured for causing a tissue response in uterine tissue; and,
 - said substance sized and shaped for sufficiently contacting uterine tissue such that said tissue response causes a gynecological change in said female.
11. An implant according to claim 10, wherein said presterilized substance is a mesh material.
12. An implant according to claim 10, wherein said presterilized substance is a polyester material.
13. An implant according to claim 10, wherein said presterilized substance is coated with an adhesion inducing substance.
14. An implant according to claim 10, wherein said presterilized substance includes a frame, at least a portion of which is covered by a mesh material.
15. An implant according to claim 14, wherein said mesh material is comprised substantially of polyester.
16. An implant according to claim 15, wherein said frame includes a plurality of linear extensions, at least two of such extensions sized and shaped to extend across a uterine wall.
17. An implant according to claim 16, wherein said at least two extensions are movable between a collapsible and a deployed position.
18. An implant according to claim 10, wherein said substance is sized and shaped so as to eliminate menorrhagia.
19. An implant according to claim 10, wherein said substance is sized and shaped so as to cause contraception in said uterus.
